

Cloud Security Alliance APAC Codebook- September 2017

New Release for the Month

Improving Metrics in Cyber Resiliency (ETIF/ETIT)

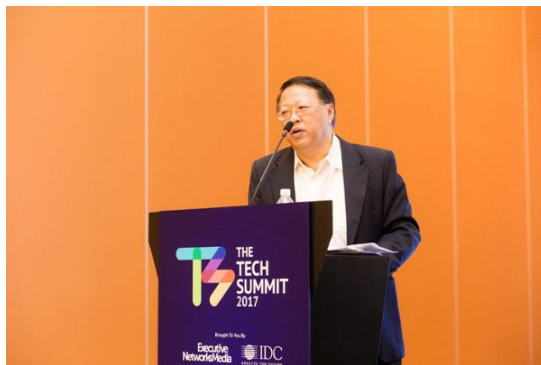

The new white paper is designed to help enterprises develop metrics and processes to measure threats before they become cyberattacks and recover functionality lost in the wake of those attacks.

The paper also introduces two key metrics—Elapsed Time to Identify Failure (ETIF) and Elapsed Time to Identify Threat (ETIT)—and proposes that the responsibility for measuring and reporting each be transferred from companies whose systems encounter cyberattacks to those in the Intrusion Detection System (IDS) space.
