

# CSA Indonesia Summit 2019 Post Event Report

23 July 2019 | Best Western, Mangga Dua Hotel & Residence, Jakarta

Today, cloud represents the preferred IT system by which organizations will transform themselves over the coming years. Cloud computing represents the future of an agile enterprise and new technology trends, such as Internet of Things, quantum computing, and container technologies.

The theme of this summit was "**Moving into the Cloud**" and targeted the user community from the private, public and people sectors towards cloud adoption. The summit discussed best practices and global governance as well as knowledge & experience sharing by Indonesian enterprises that have already embarked on their cloud journey.

## PROGRAM

The inaugural CSA Indonesia Summit commenced with Laksana BUDIWIYONO (Chairman, CSA Indonesia Chapter) and Jim REAVIS (CEO & Co-Founder, CSA) celebrating the 10<sup>th</sup> year anniversary of CSA and venturing into a new market. Despite the nascent cloud market, the line-up featured renowned individuals in the tech industry, featuring key topics such as ‘Towards Building a Secured Cloud Ecosystem’, ‘Your Cloud Journey, Secured’, ‘Building Your Cloud Security System to Minimize Breach Impact’, ‘Shifting to Cloud: Hunt Today’s Attack and Predict Threats of Tomorrow’ and panel discussion on ‘Regulations are Standing in the Way of Cloud Adoption – True or False?’.

The presentations were delivered by the industry’s thought leaders and eminent individuals in cloud computing, who spoke on topics such as:

- Dr. Hing-Yan LEE (EVP APAC, CSA) shared on ‘Towards Building a Secured Cloud Ecosystem’ which highlighted the building blocks of a cloud ecosystem such as ‘developing manpower & competency for industry’, ‘build trusted environment’ and ‘forge R&D relationships & build knowledge capital assets’. These focal points go in hand with mechanisms such as legislations and standards that help in security and data protection that are essential to building a trusted cloud environment. Dr. Lee’s presentation also featured tools such as CSA’s CCM (Cloud Controls Matrix), STAR (Security, Trust & Assurance Registry), CCSK (Certificate of Cloud Security Knowledge) and research initiatives that helps organization to weave the building blocks of a trusted cloud ecosystem together.
- In his presentation on ‘Your Cloud Journey, Secured’, Arthur LUO (Head of Cloud Security, South Asia, Check Point) covered the increasingly automated and sophisticated techniques that cybercriminals are using to penetrate cloud environments. Arthur imparted to the audience ways to gain practical knowledge of not only the risks but also how to close your security gaps in the cloud.
- Security risks are not eradicated with infrastructure evolution. In Yohannes Glen DWIPAJANA’s (VP, ICT Security Management, Telkomsel) presentation on ‘Building Your Cloud Security System to Minimize Breach Impact’, he shared on how threats and risks are still present, although different, in the cloud environment. Everyone plays a critical role in secure cloud adoption. For enterprises, he suggested best practices such as (1) Patch system and networks accordingly (2) Educate and enforce (3) Implement security measures, and (4) Create contingencies. For employees, he listed (1) Keep track of your bank receipts (2) Don’t believe anything you see (3) Be mindful of what you share on

social media (4) Secure all your devices (e.g. 2FA) and lastly, (5) Do not open emails from unfamiliar senders.

- In his presentation on 'Smart Cities: Securing Connected Vehicles', Haojie ZHUANG (Director of Research APAC, CSA) gave an overview of the evolution of vehicle connectivity, notable hacks, current measures and recommendations for securing the connected vehicle environment.
- Faisal YAHYA (Cybersecurity Strategist) highlighted in his presentation on 'Shifting to Cloud: Hunt Today's Attack and Predict Threats of Tomorrow' that the architecture for cybersecurity is changing as the perimeter disappears. Quoting Faisal, 'Cyber Security is binary. Either you have it or not at all.' Insufficient holistic protection strategies is the main reason why threats are growing. He suggested focusing on your team and help them experience how to operate in a strengthened awareness mode without slowing company digital transformation activities.
